

Aurora is the sound studio of handmade amp builder in town and harbor sea, in Yokohama. With internal structure that is carefully handmade one by one, physical measurements and electrical, as well as design approach bold and faithful, the basic in-depth is assembled in final judgment by the ear. The idea, to produce the audio equipment as craftsman to create a musical instrument is turned philosophy wants to be a work rather than industrial products amplifier.

Vida

Phono Equalizer

\$4,990

Across the entire frequency range, RIAA curve is compensated with constant condition. As a result, achieved very low distortion and high resolution in low frequency, massive mid range and very stable and bright high range. VIDA is designed to combine old technology and new state of the art semiconductor to create unique phono stage amplifier. The inductor is specially designed by Swedish company "Lundahl" for Aurorasound. Power supply is a separate chassis to secure very low signal to noise ratio with high level dynamic range. Old fashioned compact size wood case would be a good partner for your analog music enjoyment.

Inputs	1 x MM Gain 39dB 47k ohms, 1 x MC Gain 64dB
Outputs	Line Level, unbalanced RCA, optional XLR balanced
Frequency Response	10Hz – 20kHz
Harmonic Distortion	0.025%
Input Noise	-138dBV
Dimensions (WxHxD)	10.2 x 4 x 9.8 inches / 260 x 100 x 250 mm
Power Supply	100V - 120V / 220V - 240V
Weight	6.6lbs / 3kg
